Amjid Ali

Head of IT | Senior IT Manager | IT Director
MS-IT | PMP | ITIL | COBIT5 | CDCP | CITM | MCITP

Influential IT Management Executive and ICT Project Manager with 20+ years of achievement in leveraging technology to drive organizational growth. I have both technical and business skills to align tech solutions with business objectives and I am capable of orchestrating transformative business strategy through data-driven decisions.

Using my technical competencies developed through my qualification and experience with multiple technologies combined with industry knowledge and a constant zeal for learning, I am strongly equipped to implement innovative and effective solutions to resolve complex business problems.

I have sound understanding of business function, business processes and I map tech strategies with business strategies and through my innovative ideas I can implement modern technologies effectively by conceiving the original ideas. Moreover, I present and measure IT in business terms. Therefore, I have ability to understand system requirements for business, thus, I provide business managers with independent professional advice and guidance.

I have strong organizational skills which helps me to ensure complex technologies work effectively and tech infrastructure aligns with the business objectives.

With my project management skills, I effectively utilize PMI's tools and techniques to optimize project success, as the ICT Projects are "hybrids" involving multiple types of work. Therefore, I utilize methodologies by subdividing projects into their component so that independent team can maximize ICT project success. I have successfully completed over 30 projects since 2000.
